Research Interests

I work on AI assistants that effectively deliver complex information. I recently released an in-depth investigation on alt text generation with GPT-Vision while formalizing a qualitative analysis method based on techniques in social science and HCI. Previously, I conducted an in-depth observational study to propose guidelines for adapting text instructions for voice assistants. I am currently thinking about leveraging LLMs to help users fluidly navigate information while listening to audiobooks—like “fast-forwarding” one paragraph at a time rather than fifteen-second intervals.
